

VINULA KASTHURIARACHCHI

Adelaide, SA | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL PROFILE

Cyber Security graduate with a Master of Information Technology (Cyber Security), a Software Engineering background, and hands-on experience supporting cyber risk, governance, infrastructure security, and identity and access management initiatives. At the National Railway Museum, assessed an operational environment comprising 50+ assets, designed a three-zone network segmentation model, and developed security governance, asset management, access control, and incident response documentation. Brings practical experience translating technical risks into prioritised recommendations for organisational stakeholders and managed service providers.

EXPERTISE

Cyber Risk Assessment • Security Operations • Infrastructure Security • Cyber Security Governance • Identity & Access Management • Network Segmentation • Incident Response • Stakeholder Engagement

TECHNICAL SKILLS

Governance, Risk & Compliance: NIST CSF • ISO/IEC 27001 • Cyber Risk Assessment • Risk Registers • Control Gap Analysis • Security Policies & Standards • Incident Response Planning

Security Operations: Splunk • Windows Event Logs • Sysmon • Wireshark • Nessus • MITRE ATT&CK • Malware Static Analysis

Infrastructure & Identity: Active Directory • Microsoft Entra ID • Identity & Access Management (IAM) • Access Control • Multi-Factor Authentication (MFA) • Network Segmentation • Sophos Firewall • Microsoft Defender

Cloud & Development: Python • Java • JavaScript • Microsoft Azure • Amazon Web Services (AWS) • ReactJS • Node.js • Burp Suite

CERTIFICATIONS

CompTIA Security+ (In Progress)

PROFESSIONAL EXPERIENCE

Cyber Security Volunteer | National Railway Museum | Port Adelaide, SA March 2026 – Present

- Assessed an operational IT environment comprising 50+ assets, identifying infrastructure, access-control, software, operational-dependency and governance risks requiring remediation.
- Developed asset inventories, current-state network diagrams and dependency documentation covering workstations, servers, NAS devices, wireless infrastructure, network equipment and CCTV systems.
- Designed a segmented network architecture separating User, Server and CCTV environments, including VLAN requirements, traffic-flow rules and access-control logic to reduce lateral-movement risk.
- Validated Sophos firewall interfaces for the Server and CCTV networks, confirming VLAN addressing, DHCP operation and permitted cross-network connectivity before the planned migration of critical CCTV infrastructure.
- Coordinated with museum stakeholders and the managed service provider to clarify firewall changes, infrastructure limitations, VLAN requirements, implementation dependencies and onsite testing activities.
- Developed an MFA rollout plan and governance procedures covering acceptable use, third-party software restrictions, privileged-access management and the Joiner–Mover–Leaver access lifecycle.
- Produced a structured software-audit program comprising an audit plan, multi-worksheet workbook and software inventory, alongside a practical Cyber Incident Response Playbook with severity classifications, escalation pathways, scenario-based procedures and seven supporting diagrams.

Cyber Security Analyst (Capstone Project – High Distinction)

National Railway Museum | University of South Australia | Adelaide, SA

February 2025 – July 2025

- Assessed 6–8 operational systems and documented 20+ cyber-risk scenarios, mapping recommended controls to the NIST Cybersecurity Framework and ISO/IEC 27001.
- Conducted threat modelling to identify likely attack paths, organisational vulnerabilities and practical treatments aligned with the museum's operating constraints.
- Delivered an Incident Response Plan, Information Security Policy and prioritised Risk Register, providing the museum with foundational cyber-governance documentation.
- Developed a 12-month cybersecurity uplift roadmap covering governance, infrastructure security, identity and access management, and risk reduction.
- Presented risk-based recommendations to museum stakeholders, converting technical findings into clear priorities and actionable next steps.
- Achieved a High Distinction for the completed industry capstone project.

EDUCATION

Master of Information Technology (Cyber Security)

July 2023 – July 2025

University of South Australia | Adelaide, SA

Relevant Coursework: Risk Management & Governance • Enterprise Security • Security Architecture & Engineering • Security Operations • Australian Cyber Law & Digital Evidence

Bachelor of Engineering (Honours) in Software Engineering with Industrial Placement

University of Westminster | London, UK

January 2018 – July 2022

ADDITIONAL PROFESSIONAL EXPERIENCE

Team Member | Woolworths Group | Adelaide, SA

October 2023 – Present

- Completed two periods of Acting Assistant Department Manager responsibilities totalling nine weeks, coordinating daily operations, delegating work, resolving operational issues and supporting team performance.
- Prioritise operational tasks, escalate issues and maintain compliance with food safety, workplace health and safety, and organisational procedures in a high-volume retail environment.
- Resolve customer and operational issues through clear communication with team members, department leaders and store management.

Software Engineering Consultant | Evolza | Colombo, Sri Lanka

March 2023 – July 2023

- Delivered front-end solutions by translating client requirements into structured technical implementations.
- Presented solution demonstrations, trained clients and supported post-deployment activities, strengthening adoption and resolving implementation issues.

Software Engineer Intern | Kavithi Group | Colombo, Sri Lanka

July 2022 – January 2023

- Developed front-end functionality for ERPNext business applications and the Blynxx Quiz App using Angular and ReactJS.
- Supported feature implementation, testing and delivery within an Agile software development environment.

Software Engineer Intern | iiH Solutions (Pvt) Ltd. | Colombo, Sri Lanka

July 2020 – July 2021

- Developed and maintained reusable ReactJS components for enterprise software applications.
- Worked within an Agile development team to test, refine and deliver maintainable front-end functionality against project requirements.
